I didn't discover that audio books were a real thing until later in my life, sometime after college. I picked up Eye of the World and was completely blown away as the characters came to life. I was blown away, and still am to this day, by the talent that poured into my ears as I experienced the Wheel of Time like it was my first time. My childhood dreams had been re-imagined into something I never thought possible. To this day, I still compare audio book narrators by how they compare to my two favorite readers.
